New Item

Enter an item name

Practical-2-File-Folder-Pipeline

Select an item type

 **Pipeline**
Build, test, and deploy using pipelines. Supports stages, parallel work, and running on multiple agents.

 **Freestyle project**
Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.

 **Multi-configuration project**
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

 **Folder**
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

Practical-2-File-Folder-Pipeline x +

localhost:8080/job/Practical-2-File-Folder-Pipeline/configure

 **Jenkins** / Practical-2-File-Folder-Pip... / Configure

  

Configure

 Pipeline

 Advanced

Define your pipeline using Groovy directly or pull it from source control.

Definition

Pipeline script

Script ?

```
2 agent any
3
4 stages {
5   stage('Project 1: Create Folder') {
6     steps {
7       echo "Project 1: Creating folder Folder1Jenkins"
8       bat 'mkdir Folder1Jenkins'
9     }
10  }
11
12   stage('Project 2: Create File') {
13     steps {
14       echo "Project 2: Creating file myFile.txt"
15       bat 'type nul > Folder1Jenkins\myFile.txt'
16     }
17  }
```
