

Practical-4

The image shows two screenshots of the Jenkins web interface. The top screenshot is the 'New Item' page, and the bottom screenshot is the 'Configure' page for a new pipeline.

New Item Page:

- URL: `localhost:8080/view/all/newJob`
- Item Name: `docker-pipeline`
- Item Type Selection:
 - Pipeline**: Build, test, and deploy using pipelines. Supports stages, parallel work, and running on multiple agents.
 - Freestyle project: Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.
 - Multi-configuration project: Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.
 - Folder: Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.
- Buttons: `OK`

Configure Page:

- URL: `localhost:8080/job/docker-pipeline/configure`
- Left Sidebar: `General`, `Triggers`, `Pipeline` (selected), `Advanced`
- Script Editor:

```
21 }
22
23 stage('Run Container') {
24     steps {
25         bat 'docker run -d -p 8085:80 --name my-nginx nginx'
26     }
27 }
28
29 stage('Verify Container') {
30     steps {
31         bat 'docker ps'
32     }
33 }
34 }
35 }
```
- Options: ☒ Use Groovy Sandbox
- Buttons: `try sample Pipeline...`, `Pipeline Syntax`
- Section: `Advanced`

The bottom of the image shows a Windows taskbar with the date `02-05-2026` and time `11:47`.
